Don’t forget to check:

Vaccine Preparation

- **Thaw** expiry date?
- **Manufacture** expiry date?
- Time the vial was first **punctured**?
- Time the syringe was **drawn**?

- **DISCARD** the vaccine if it exceeds expiry dates and times.
- **Checking AIR** before administering the vaccine will help avoid vaccination administration errors.

Vaccine Administration

- Check Australian Immunisation Register (**AIR**) before administering vaccine
- **Right** vaccine for the patient?
- **Right** dose interval?
- **Right** dose for this patient and cohort?
- If required, has the vaccine been **diluted** correctly?

If you respond ‘No’ to any of the above, DO NOT administer the vaccine.

COVID-19 VACCINATION
